

Mathlete

First things first, I'm the realest (realest)
Drop this and let the whole world feel it (let them feel it)
And I'm still in the Graphin' Bizness
I can put it down, when I'm talking 'bout specifics (Right)
You should make discrete graphs like this (Huh?)
Drop some points and spread them out like this (Yeah)
Got some space on that grid, see how this
Shows that you can't buy half a bottle of Sunkist (Of Sunkist)
Buyin' wings by their weight, you can choose that (Choose that)
That continuous sticker is goin' on your paper bag (What?)
Bring the hooks in, where the bass at?
Sunkist chillin', have a wing, you should taste that.

I'm a mathlete
You already know
We graph on large planes
From L.A. to Tokyo
I'm a mathlete
Watch my pencil go
The range and domain I'm 'bout to show

I said baby, I do this, I thought that, you knew this
When you started graphin' sometimes, the truth is
When you're gettin' started, check out numbers you've charted
Some quadrants are stupid, and so they end up discarded
Be sure that you label your lines, if there's no title, decline
And if you skip numbers then showing a break in your line would be kind
So independent is fine, you put it on the x line.
Then just don't worry 'bout dependent, gotta stay on the y
Now tell me, who that, who that? That do that, do that?
The domain covers x, I thought you knew that, knew that
and the range covers Y, that's what I've been told
I been working, I'm up in here with some graphs to show.

I'm a mathlete
You already know
We graph on large planes
From L.A. to Tokyo

I'm a mathlete
Watch my pencil go
The range and domain I'm 'bout to show

When you graph lines
They show data that's bivariate
Try to count all the points
But you fail 'cause they're infinite
Yeah, keep on counting them up
The data is endless, if you graph it you're stuck
Graph a few points, yeah that's what's up
Connect with a line and now you're in luck (Ow!)

Graphin' lines, how you love that
Make 'em endless gotcha asking how I does that
Put arrows on both ends, don't touch that
Look at that I bet you wishing you could construct that
It's just the way you like it, huh?
A beautiful graph, with labels and title, huh? (say what what?)
Never leave out nothin'
You know I'm reppin', all the people round the world like

I'm a mathlete
You already know
We graph on large planes
From L.A. to Tokyo
I'm a mathlete
Watch my pencil go
The range and domain I'm 'bout to show

Who that, who that, my graphs are so fly
That do that, do that, and now you know why
Who that, who that, my graphs are so fly
(Blow...)
